

Why store photos online?

PROS	CONS
In the case of your hard drive crashing or your camera's memory being lost, you have back-ups of your photos.	Limitations on storage space - often a few gigabytes.
It makes it easier to share your photos with friends and family.	Anyone else in the world can see your photos unless you watch your privacy settings carefully.
You have access to your photos anywhere you have access to the internet.	You may not always have access to the internet - and service providers sometimes go out of business.

Places to store digital photos online

Flickr	Picasa/Google Drive
<p>www.flickr.com</p> <ul style="list-style-type: none"> • 1 terabyte of photo and video storage. • Can upload photos up to 200 MB, videos up to 1 GB, and you have unlimited monthly bandwidth. • With paid account, get 2 TB of storage and no ads. 	<p>picasaweb.google.com</p> <ul style="list-style-type: none"> • Works with Picasa desktop application - can upload from app or through browser. • 15 GB of free storage across Google Drive, Gmail, and Google + photos. • Images limited to 20MB each in Picasa.

Uploading photos

- Go to <http://www.flickr.com/> and sign in.
- Click on **Upload**.
- Click on **Choose photos and videos**.
- A dialogue box will appear. Click here and select where your photos are located, like My Pictures or your plugged-in camera.
- Select the photo you want to upload to Flickr.
- Click on **Open** to upload.

Tip: Use the "Thumbnail" view to see previews of pictures.

My Photo Management Plan

How will I use my photos?

Post to social media?

Share digitally, only with friends and family?

Print individual photos?

Print albums?

Where will I keep photos that I delete from my phone?

How many photos do I take?

How large are they? (How much space will they take up?)

Will I consider purchasing an external hard drive/additional cloud storage?

Am I forgetful? Should I use cloud storage with auto upload?

What kind of editing will I do?

Will I use the editing app on my phone for basic cropping and adjustments?

Do I want to use different filters, tilt shift, frames, or other editing tools?
